

Lab: Agentic approval system with Dataverse, Copilot Studio and Power Platform

Import Dataverse solution

In this exercise, you'll import a Dataverse solution to use in the following exercises

Exercise 1 – Import solution

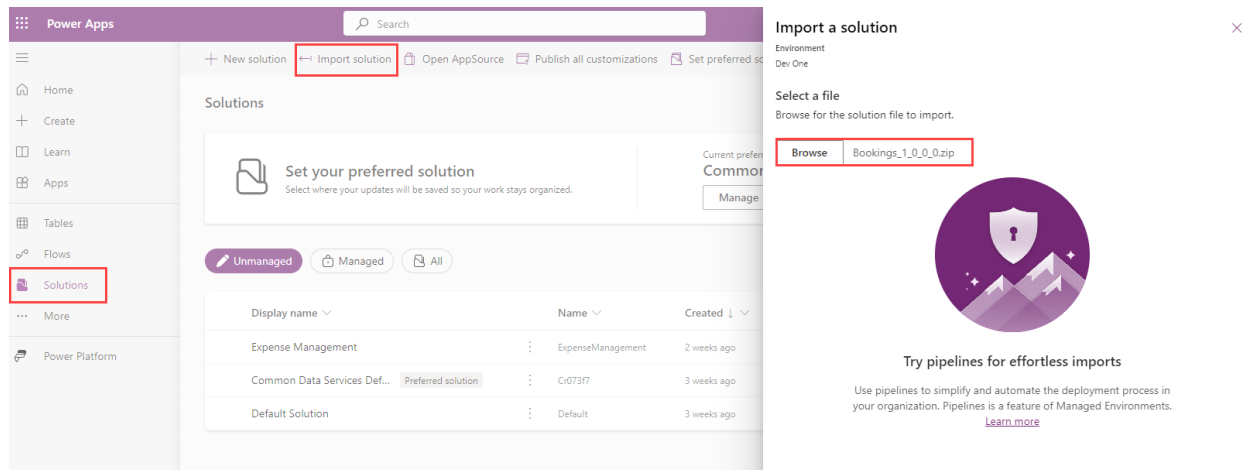

In this exercise, you will import a Dataverse solution into your environment that contains the tables needed for the labs.

Task 1.1 – Download solution

1. In a new browser tab, navigate to https://github.com/MicrosoftLearning/mslearn-copilotstudio/raw/main/Allfiles/Bookings_1_0_0_0.zip to download the **Bookings_1_0_0_0.zip** file.

Task 1.2 – Import solution

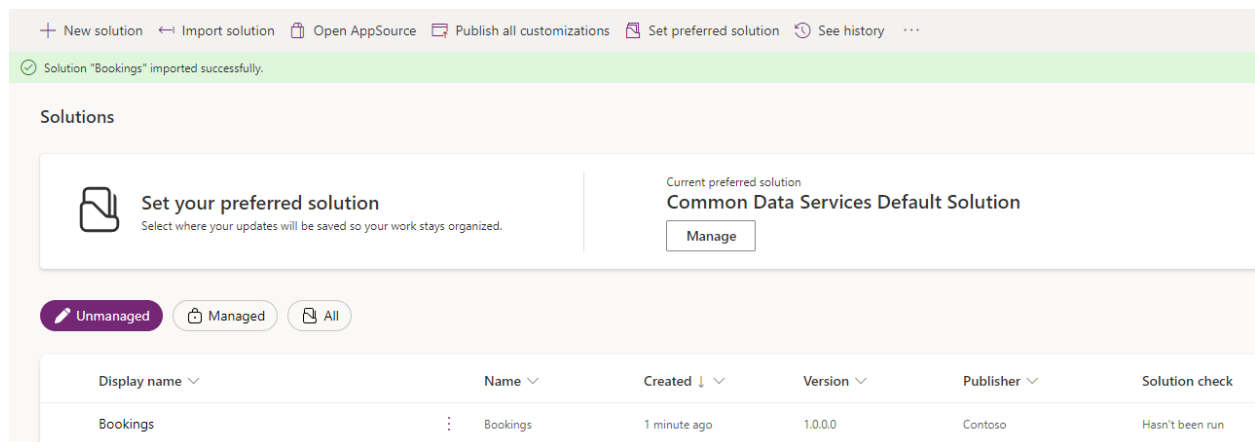

1. In a new browser tab, navigate to <https://make.powerapps.com>.
2. If prompted for credentials, sign in with your email address and password.
3. If prompted for contact information, set the Country/region and select **Get Started**.
4. In the upper-right of the screen, verify that the **Environment** is set to your environment. This is where you will be working for the entirety of the labs. If it is not, select the appropriate environment.
5. In the left navigation, select **Solutions**.
6. In the top bar, select **Import solution**.
7. Select **Browse** and locate the **Bookings_1_0_0_0.zip** file from your Downloads folder and select **Open**.

8. Select **Next**.

9. Select **Import**.

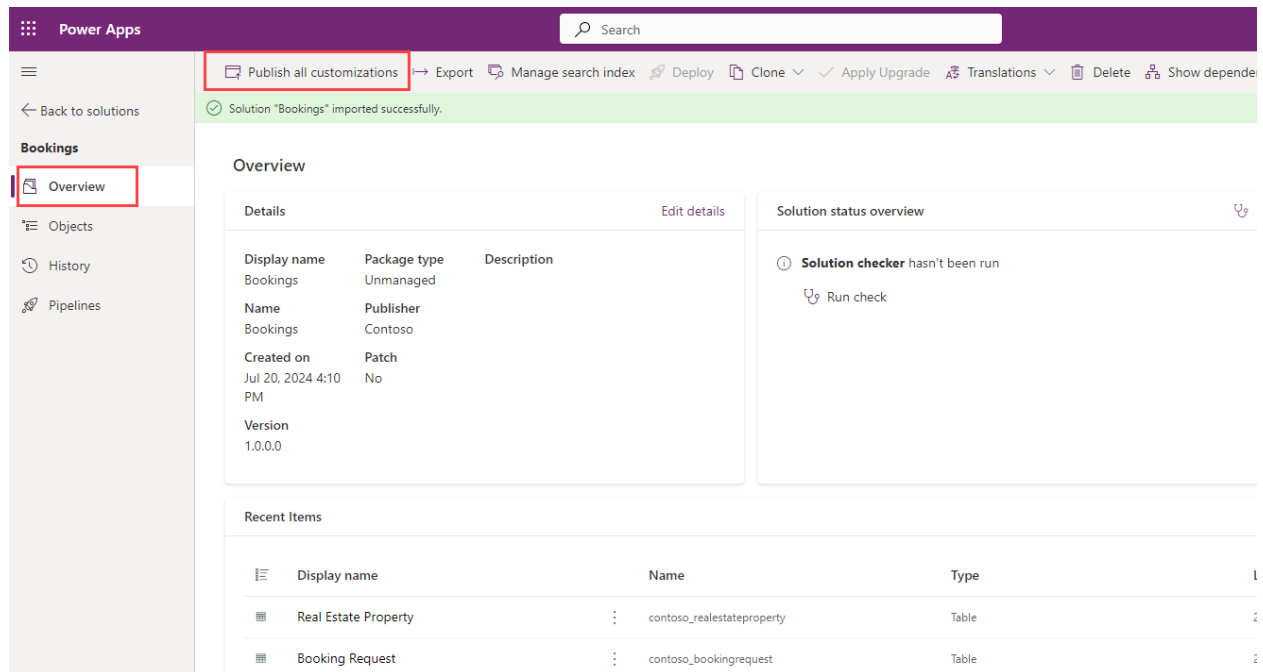

The solution will import in the background. This may take a few minutes. You may refresh the window.

Alert: Wait until the solution has finished importing before continuing to the next step.

10. When the solution has imported successfully, open the **Bookings** solution.

11. In the left navigation, select the **Overview** tab.

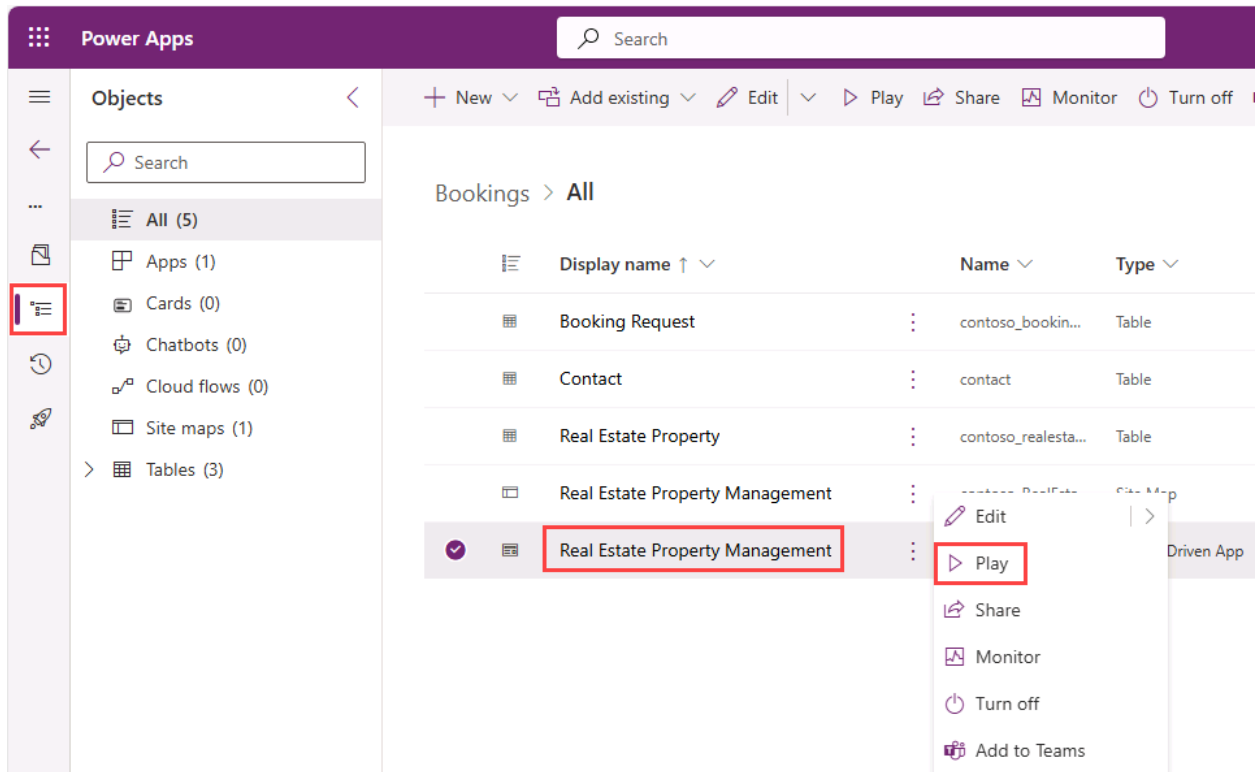

12. Select **Publish all customizations**.

Task 1.3 – Set preferred solution

1. Select **Solutions**.
2. Select **Manage** in the *Current preferred solution* tile.
3. Select **Bookings (contoso)**.
4. Select **Apply**.

Task 1.4 – Test data

1. In the left navigation of the Bookings solution, select the **Objects** tab.
2. Select the **ellipses ...** menu for the **Real Estate Property Management** Model-Driven App, and select **Play**. This is a simple model-driven app that will allow you to create new Real Estate Property records.

3. Select **+ New**.
4. Enter the following data:
 - a. **Property Name:** 1100 High Villas
 - b. **Owner:** Select your user (search for your provided username)
 - c. **Asking Price:** 250,000
 - d. **Street:** Main Avenue
 - e. **City:** Redmond
 - f. **Bedrooms:** 3
 - g. **Bathrooms:** 2

You now have 2 Active Real Estate Properties in the view.

Build an initial agent

Scenario

In this exercise, you will:

- Create and name an agent
- Add description for what the agent should do
- Configure Generative AI answers

What you will learn

- How to create an agent using natural language
- How to configure Generative AI answers for an agent

High-level lab steps

- Create a new agent
- Tell your agent what its primary purpose is and how it should act
- Add Generative AI instructions

Prerequisites

- Must have completed Exercise: **Import Dataverse solution**

Exercise 1 - Create agent

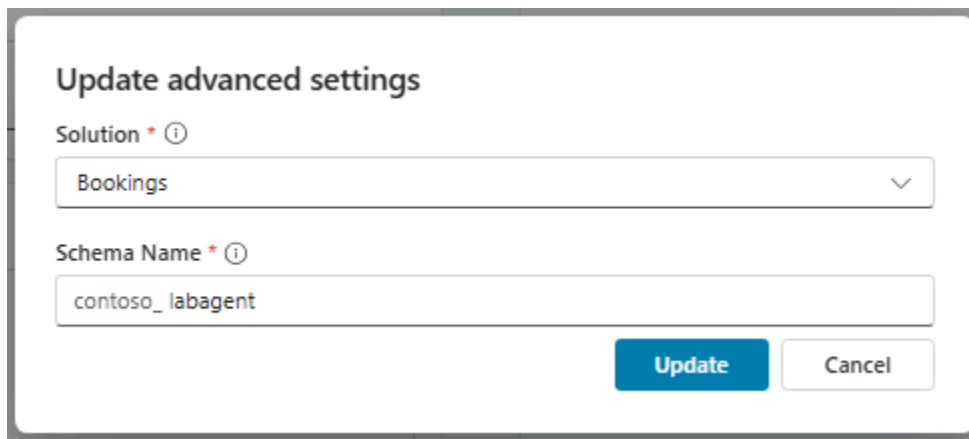

In this exercise, you will access the Microsoft Copilot Studio portal, the Developer environment and create a new agent.

Task 1.1 – Open Bookings solution

1. In a new browser tab, navigate to <https://make.powerapps.com>.
2. Make sure that you are in the appropriate environment.
3. Select **Solutions > Bookings**
4. Select **New > Agent > Agent**

Task 1.2 – Create an agent

1. Select the **Configure** tab.
2. In the **Name** text box, enter **Real Estate Booking Service**
3. In the **Description** text box, enter **Create bookings for real estate properties**
4. In the **Instructions** text box, enter **Create an agent for topics relating to creating bookings for real estate properties**
5. Select the **ellipses ...** menu in the upper-right of the page, and select **Update advanced settings**.
6. Enter labagent for **Schema Name**.

The screenshot shows a modal window titled "Update advanced settings". It contains two input fields: "Solution" with a dropdown menu currently showing "Bookings", and "Schema Name" with a text box containing "contoso_labagent". Both fields have a red asterisk and an information icon to their left. At the bottom right of the modal are two buttons: a blue "Update" button and a white "Cancel" button with a grey border.

7. Select **Update**.
8. In the upper-right of the page, select **Create**. Wait for your agent to finish setting up.
9. In the right **Test your agent** pane, enter **How do I make a booking?** and view the response.

Leave this window open.

Exercise 2 - Add Generative AI answers

In this exercise, you will access the Microsoft Copilot Studio portal and add knowledge that the agent will use to answer questions by using Generative AI.

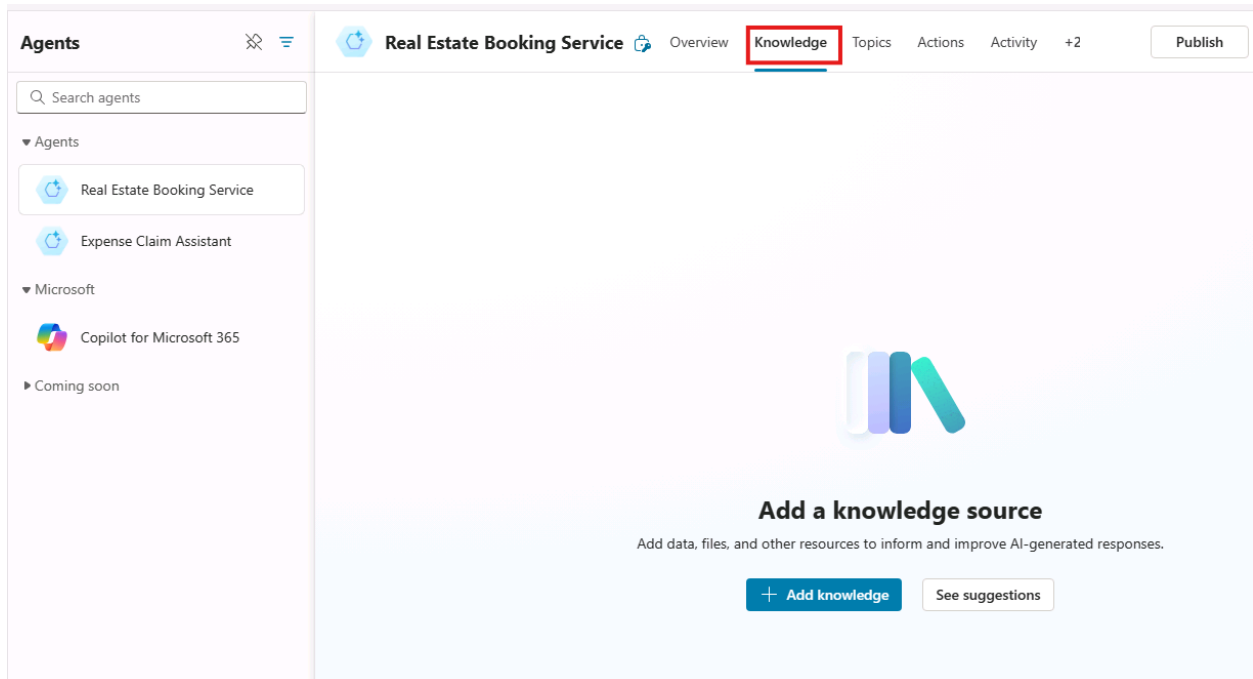

Task 2.1 - Disable generative orchestration

1. Select **Settings**.
2. For **Use generative AI orchestration for your agent's responses?** select **No - Use classic orchestration, limiting responses to the content and behavior defined in your agent's topics**. This turns Orchestration off for the purpose of this lab.
3. Select **Save**.

4. Close out of the Settings window.

Task 2.2 – Add a knowledge source

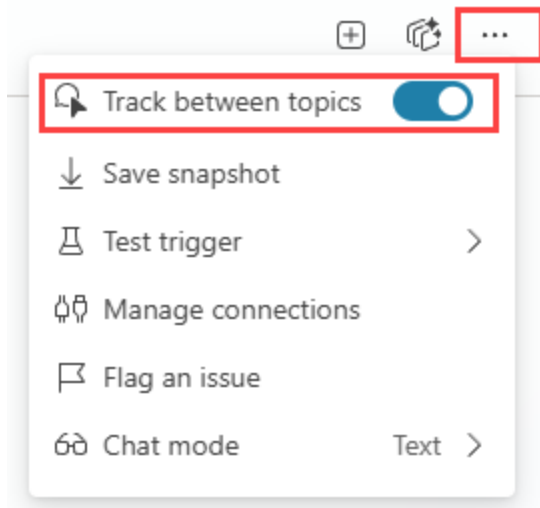

1. Select the **Knowledge** tab.

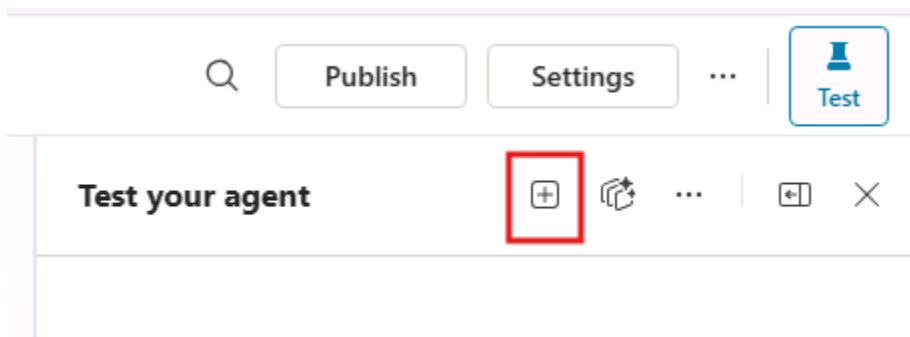

2. Select **+ Add knowledge**.
3. Select **Public websites**
4. In the **Public website link** text box, enter <https://word.cloud.microsoft/>.

5. Select **Add**.
6. Select **Add to agent**.
7. Select the **Overview** tab.
8. Select the **ellipses ...** menu at the top of the **Test your agent** pane.
9. Enable **Track between topics**.

10. At the top of the **Test your agent** pane, select the **Start new test session** icon.

11. In the **Ask a question or describe what you need** text box, enter **How do I boost real estate promotion?** View your response.

How do I boost real estate promotion?

Boosting Promotion of Real Estate Listings

1. Utilize Flyer Templates

- Create eye-catching flyers using free and customizable templates in Microsoft Word.
- Choose from classic, event, business, or holiday flyer templates to match your listing's theme.
- Flyers can be used to promote open houses, new listings, or special events related to your properties.
- Personalize the flyer with property details, images, and contact information to attract potential buyers and increase engagement [1](#) .

2. Design Professional Brochures

- Use ready-made brochure templates in Microsoft Word to showcase your real estate listings.
- Select business or event brochure templates and customize them with property photos, descriptions, and branding.
- Brochures are effective for sharing detailed information and reaching a wider audience, whether distributed digitally or in print.
- Personalize templates with images, color palettes, font sizes, and layout to make your listings stand out [2](#) .

3. Collaborate and Share Online

- Create, edit, and share promotional documents using Microsoft Word for the Web.
- Collaborate with your team in real-time to refine marketing materials and ensure consistency.
- Share documents instantly with clients or on social media to

Ask a question or describe what you need

0/2000

Manage topics

Scenario

In this exercise, you will:

- Manage existing topics
- Create and edit topics by using natural language
- Create a topic manually by using trigger phrases

What you will learn

- How to configure agent topics

High-level lab steps

- Disable topics
- Create new and edit topics with natural language
- Create a new topic and add trigger phrases

Prerequisites

- Must have completed above Exercise: **Build an initial agent**

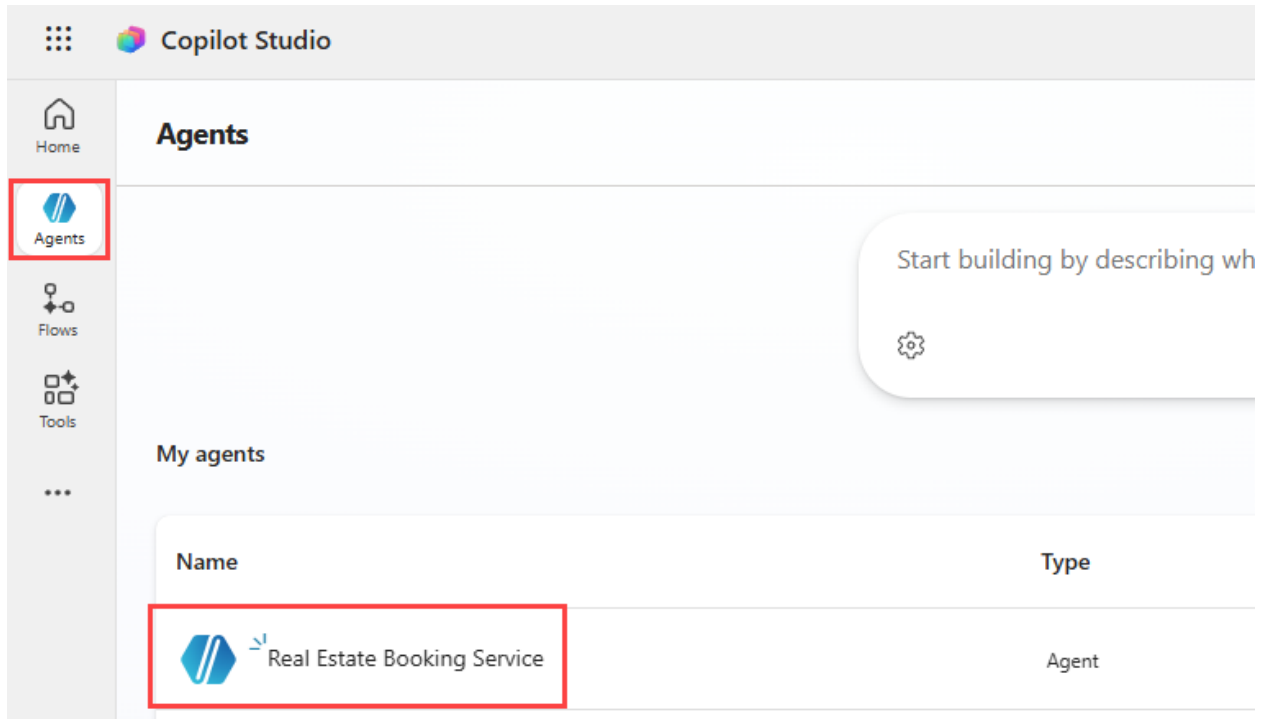

Detailed steps

Exercise 1 - Remove topics

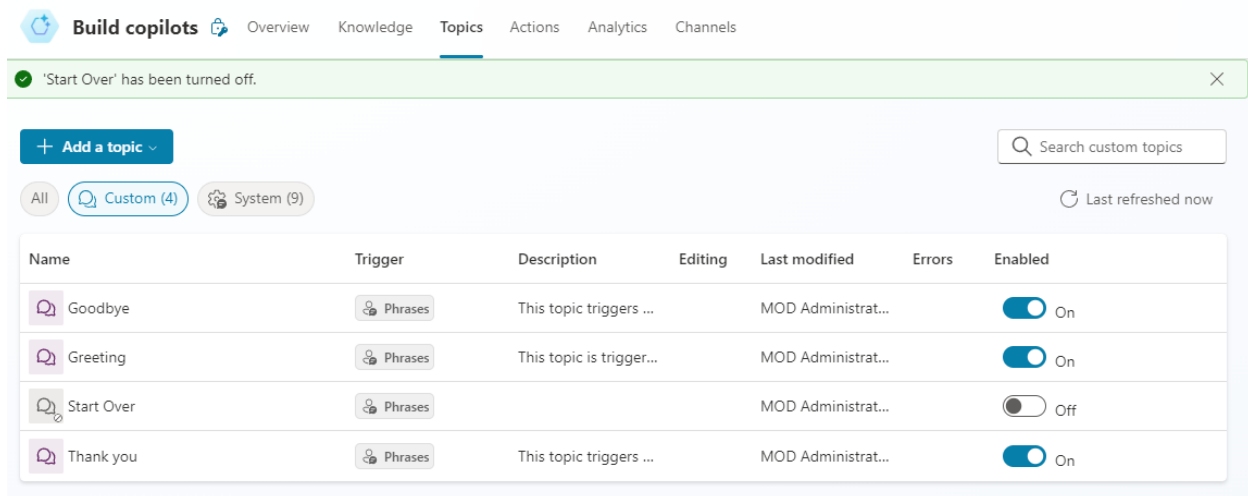

In this exercise, you will remove topics in an agent.

Task 1.1 – Disable topics

1. Navigate to the Microsoft Copilot Studio portal <https://copilotstudio.microsoft.com> and ensure you are in the appropriate environment.
2. Select **Agents** from the left navigation pane.
3. Select the **Real Estate Booking Service** agent you created in the previous lab.

4. Select the **Topics** tab.
5. Toggle **Enabled** to **Off** for the **Start Over** topic.

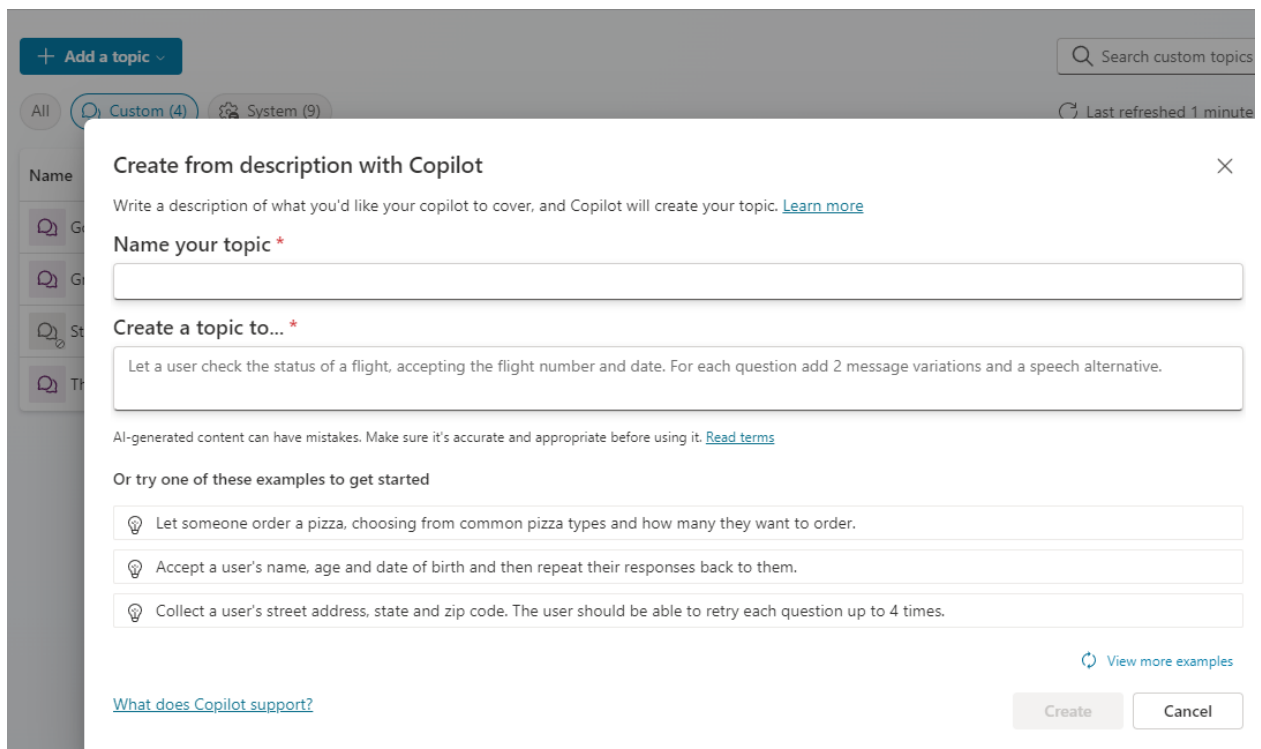

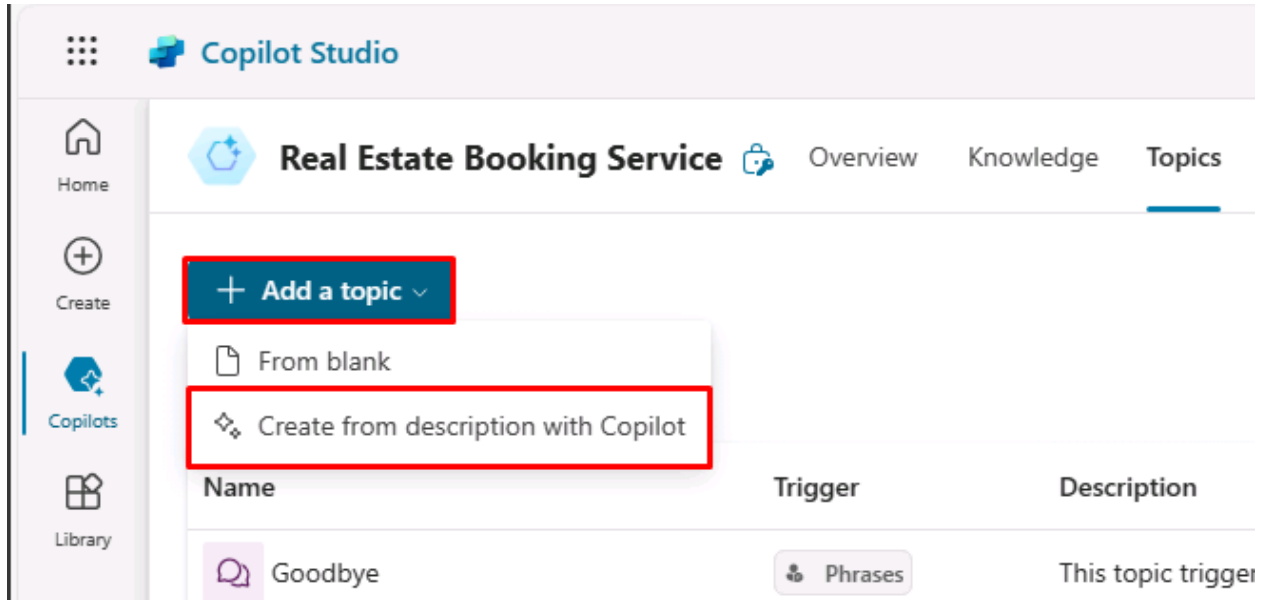

Exercise 2 - Create topics with natural language

In this exercise, you will create topics in an agent and add trigger phrases.

Task 2.1 – Add a topic using copilot

1. Select **+ Add a topic** and select **Create from description with Copilot**. A new window appears.

2. In the **Name your topic** text box, enter **Customer Details**.
3. In the **Create a topic to...** text box, enter **Ask the customer for their name and email address**.

4. Select **Create**.
5. Select **Save**.

Task 2.2 – Update nodes with natural language

1. If the **Test your agent** pane is open, close the pane.
2. If the **Edit with Copilot** pane is not shown on the right side of the **Customer Details** pane, select the **Copilot** icon in the upper part of the authoring canvas.

3. Select the second **Question** node **What is your email address?**

Note: The message should be updated to include the *Name* variable from the prior node, and should look similar to the screenshot above. If Edit with copilot did not update the question node correctly, select Undo, and retry with a different prompt.

6. Select **Save**.

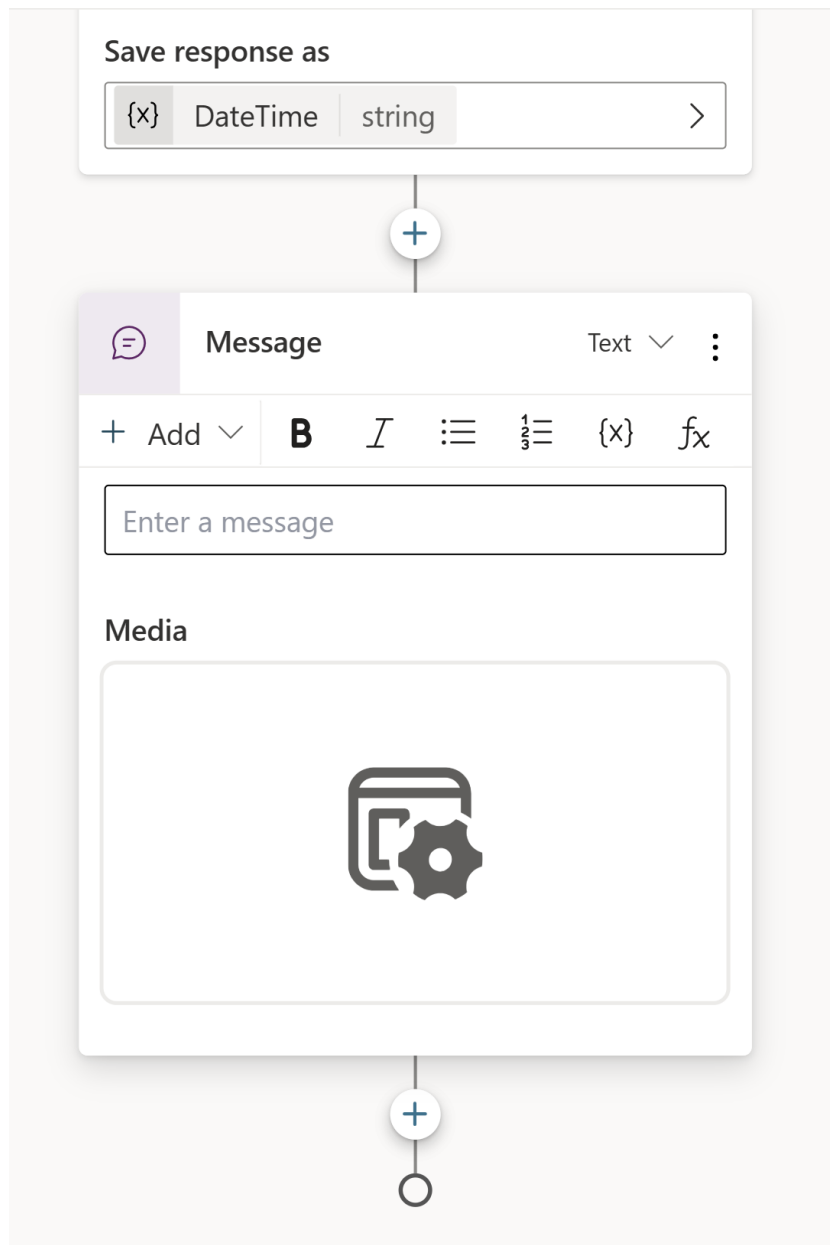

Task 2.3 – Add nodes with natural language

In addition to adding updating existing nodes, you can use Copilot to add new ones.

1. Make sure that no node is selected by selecting the empty space in the authoring canvas.
2. In the **Edit with Copilot** panel, in the **What do you want to do?** field, enter the following text:

Summarize the information collected in an adaptive card

3. Select **Update**.
4. A message node with an Adaptive Card is added to the end of the topic.

5. Select the **Media** box in the Adaptive Card. The Adaptive Card properties should appear on the right of the page.

Card Content

 Edit formula 

```
{
  type: "AdaptiveCard",
  body:
  [
    {
      type: "TextBlock",
      size: "Medium",
      weight: "Bolder",
      text: "Summary"
    },
    {
      type: "FactSet",
      facts:
      [
        {
          title: "Full Name",
          value: Text(Topic.Name)
        },
        {
          title: "Email Address",
          value: Text(Topic.EmailAddress)
        }
      ]
    }
  ],
}
```

Your Adaptive Card formula should look similar to the one above. If it doesn't, then you can paste in the formula below:

```
{
  type: "AdaptiveCard",
  body:
  [
    {
      type: "TextBlock",
      size: "Medium",
      weight: "Bolder",
      text: "Summary"
    },
    {
      type: "FactSet",
```

```

facts:
[
  {
    title: "Full Name",
    value: Text(Topic.Name)
  },
  {
    title: "Email Address",
    value: Text(Topic.EmailAddress)
  }
],
{
  type: "TextBlock",
  text: "Thank you for providing the information."
}
]
}

```

6. Select the **Copilot** icon (You may need to select **More > Copilot**) to reopen the **Edit with Copilot** pane.
7. Make sure that no node is selected by selecting the empty space in the authoring canvas.
8. In the **What do you want to do?** field, enter the following text:

Add a new multiple choice question to prompt the user if the details are correct with two options Yes or No

9. Select **Update**.
10. A new question node is added to the end of the topic with options for the user to select.

Question Text ...

Are the details correct?

Identify

Multiple choice options >

Options for user

Yes

No

+ New option

Save user response as

{x} DetailsCorrect choice >

11. Select **Save**.

Task 2.4 - Test the topic

1. If the **Test your agent** panel is closed, select the **Test** icon in the upper-right of the page.
2. Select the **Start new test session** icon at the top of the testing panel.

Search Publish Settings ... Test

Test your agent + ...

3. In the **Ask a question or describe what you need** text box, enter **Customer information**.
4. Enter your name and email address.
5. Select **Yes**.

6. Select **Save**

Exercise 3 - Author topics manually

Topics can be created manually by adding trigger phrases.

Task 3.1 - Create a topic from blank

1. Select the **Topics** tab in the top bar of **Real Estate Booking Service**.
2. Select **+ Add a topic** and select **From blank**.
3. Select the **Details** icon to open the Topic details dialog (you may need to select **More > Details**).

The screenshot shows the 'Real Estate Booking Service' interface. The top navigation bar includes 'Overview', 'Knowledge', 'Topics' (highlighted with a red box), 'Actions', 'Analytics', and 'Channels'. Below the navigation bar, there is a toolbar with icons for 'Copilot', 'Comments', 'Variables', 'Topic checker', 'Details' (highlighted with a red box), 'More', and a 'Save' button. The main content area displays the 'Topic details' dialog, which has tabs for 'Topic details', 'Input', and 'Output'. The 'Topic details' tab is active, showing fields for 'Name *', 'Display name', 'Description', and 'Status'. The 'Name' field contains 'Untitled', the 'Display name' field contains 'Enter a display name', the 'Description' field contains 'Enter a description', and the 'Status' field is set to 'On' with a checked checkbox.

4. In the **Name** field, enter the following text:

Book Showing

5. In the **Display Name** field, enter the following text:

Book a Real Estate Showing

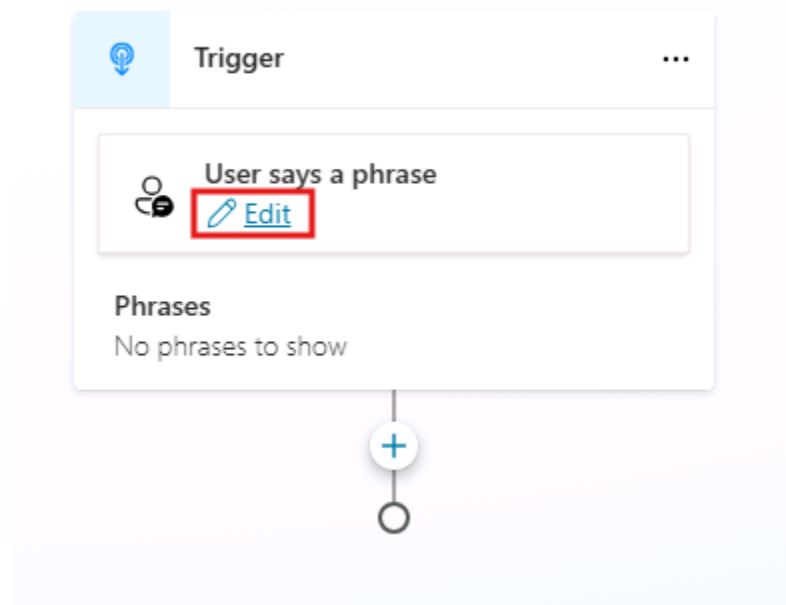

6. In the **Description** field, enter the following text:

Select the property and requested date and create a booking request

7. Select **Save**.

Task 3.2 - Add trigger phrases

1. Select **Edit** under **User says a phrase** in the **Trigger**.

2. Enter I want to book a real estate showing under **Add phrases** and select the + icon.
3. Enter Schedule a real estate showing under **Add phrases** and select the + icon.
4. Enter Arrange the viewing for a real estate property under **Add phrases** and select the + icon.
5. Enter Set up an appointment to view a house under **Add phrases** and select the + icon.
6. Enter Plan a property viewing under **Add phrases** and select the + icon.
7. Select **Save**.

Manage nodes

Scenario

In this exercise, you will:

- Author the conversational flow
- Manage variables

What you will learn

- How to add nodes to a topic to author the conversational flow

High-level lab steps

- Configure variable scope
- Create and edit nodes
- Test the agent and configure authentication

Prerequisites

- Must have completed **above exercise: Manage topics**

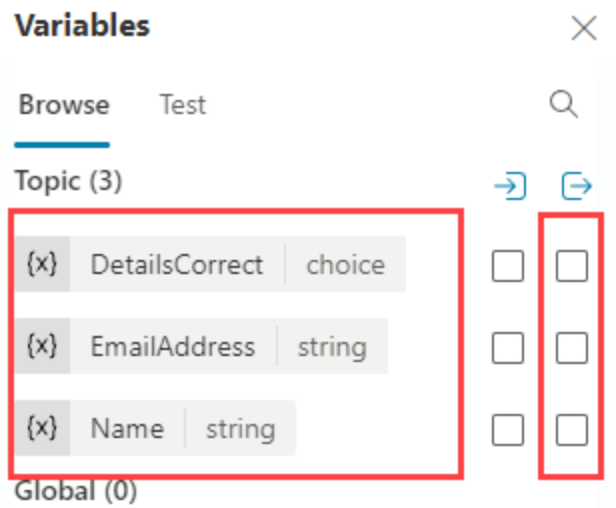

Detailed steps

Exercise 1 - Variable scope

Enable variables to be accessed by other topics.

Task 1.1 - Configure the scope of the variables

1. Navigate to the Copilot Studio portal <https://copilotstudio.microsoft.com> and ensure you are in the appropriate environment.
2. Select **Agents** from the left navigation pane.
3. Select the **Real Estate Booking Service** agent you created in the earlier lab.
4. Select the **Topics** tab.
5. Select the **Customer Details** topic.
6. Select **Variables** in the top bar to open the Variables pane (you may need to select **More > Variables**).
7. Select and expand **Topic** variables.
8. Select the right-hand check boxes for the three topic variables.

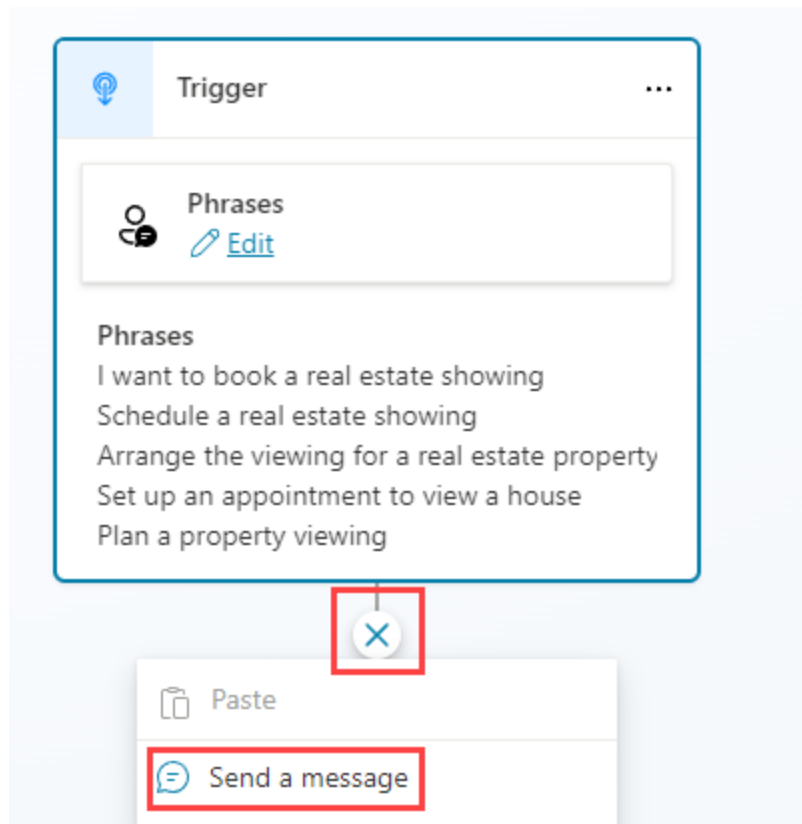

9. Select **Save**.

Exercise 2 - Author topics manually

The conversational flow in a topic can be created manually by adding nodes.

Task 2.1 - Add a message node

1. Select the **Topics** tab.
2. Select the **Book Showing** topic.
3. Select the the + icon under the Trigger node and select **Send a message**.

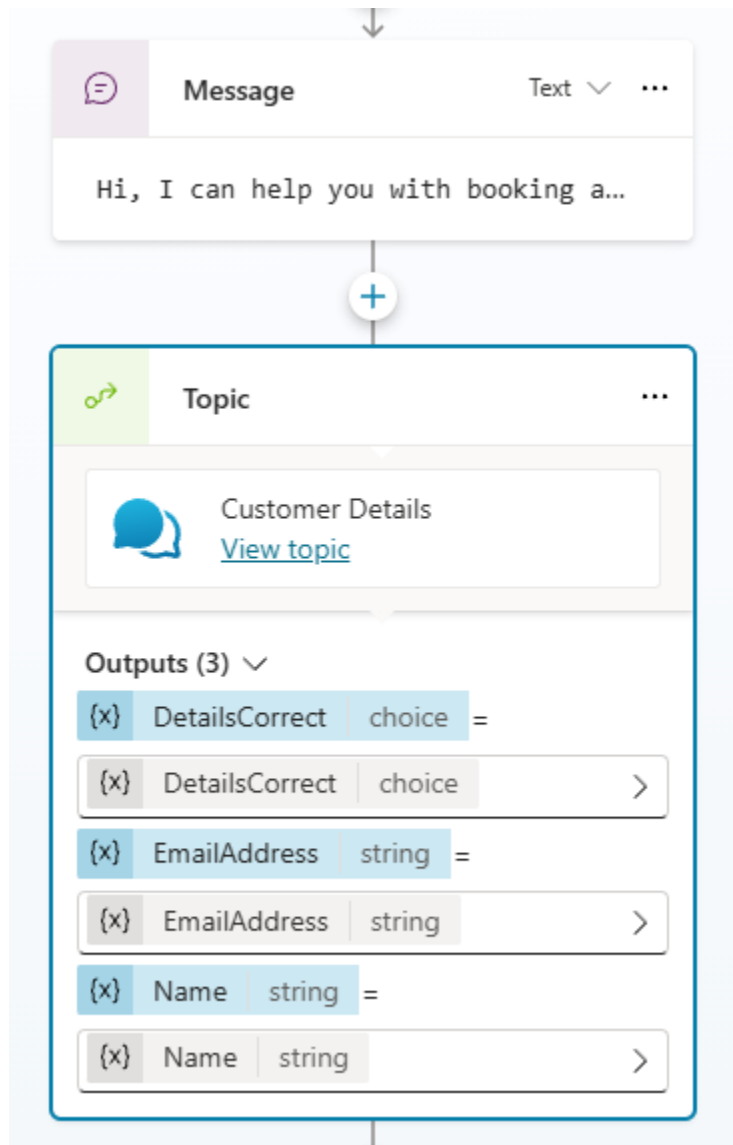

4. In the **Enter a message** field, enter the following text:

Hi, I can help you with booking a real estate property showing.

5. Select **Save**.

Task 2.2 - Add a Topic management node

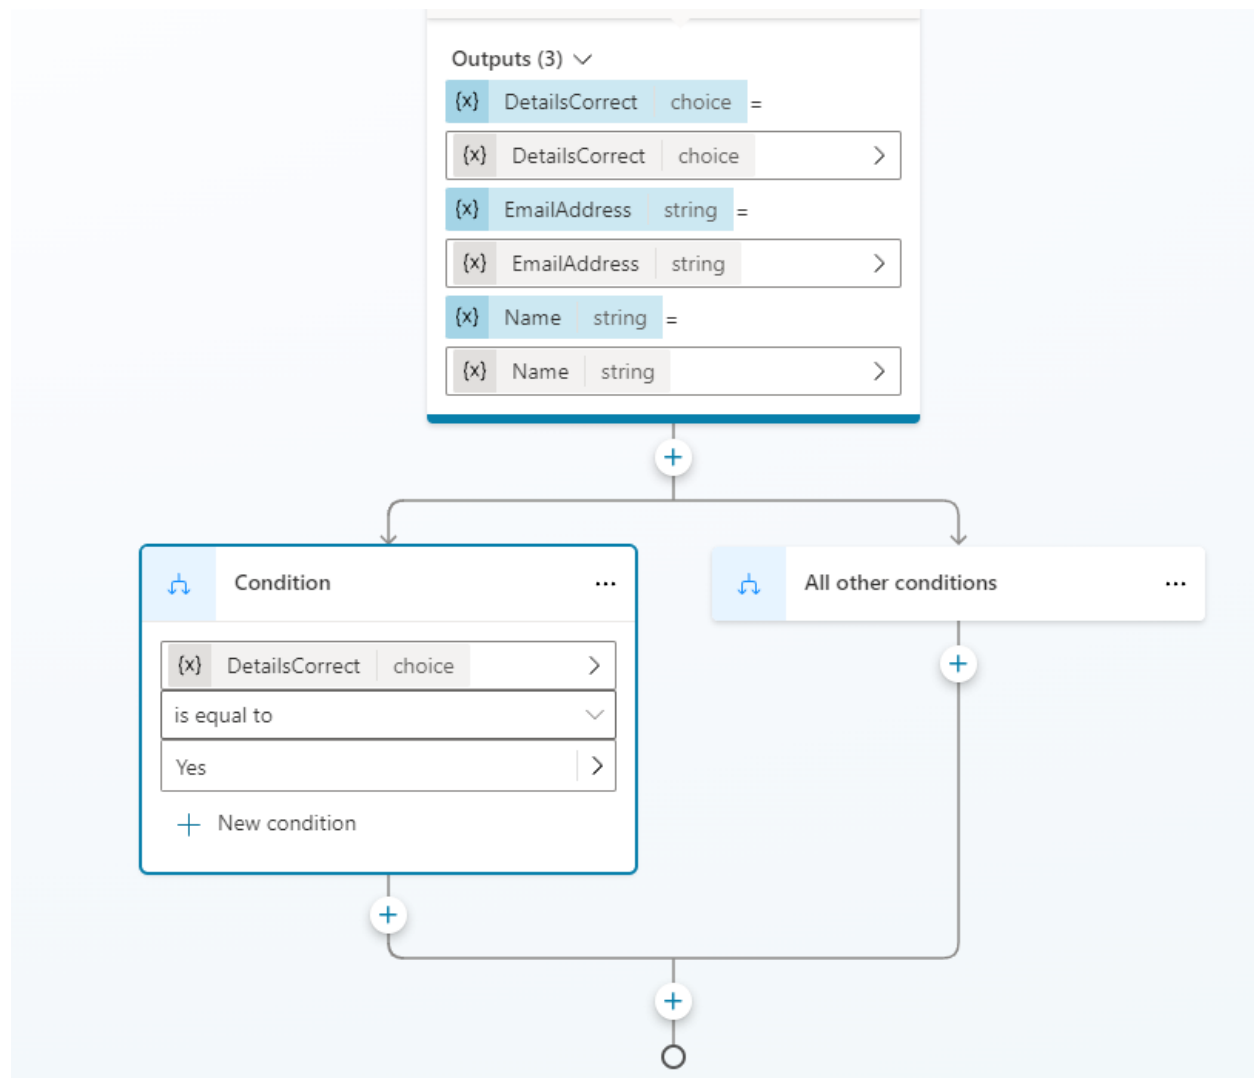

1. Select the the + icon under the **Message** node, then select **Topic management > Go to another topic > Customer Details**.

2. Select **Save**.

Task 2.3 - Add condition node

1. Select the the + icon under the **Topic** node and select **Add a condition**.
2. In the **Condition** node, select the **DetailsCorrect** variable.
3. Select **is equal to**.
4. Select **Yes**.

5. Select **Save**.

Task 2.4 - Add question nodes

1. Select the the + icon under the left **Condition** node and select **Ask a question**.
2. In the **Enter a message** field, enter the following text:

Which property do you want to see?

3. Select **User's entire response** for **Identify**.
4. Select the variable in **Save user response as** and enter **PropertyName** for **Variable name**.

The screenshot displays the Botpress workflow editor and the 'Variable properties' panel. In the workflow editor, a 'Question' node is highlighted, containing the text 'Which property do you want to see?'. The 'Identify' section is set to 'User's entire response'. The 'Save user response as' section is set to 'PropertyName' with type 'string'. The 'Variable properties' panel on the right shows the 'Variable name' as 'PropertyName', 'Type' as 'string', and 'Reference' as the 'Question' node. The 'Usage' section is set to 'Topic (limited scope)'.

5. Select **Save**.
6. Select the the + icon under the new **Question** node and select **Ask a question**.
7. In the **Enter a message** field, enter the following text:

What date and time do you want to see the property?

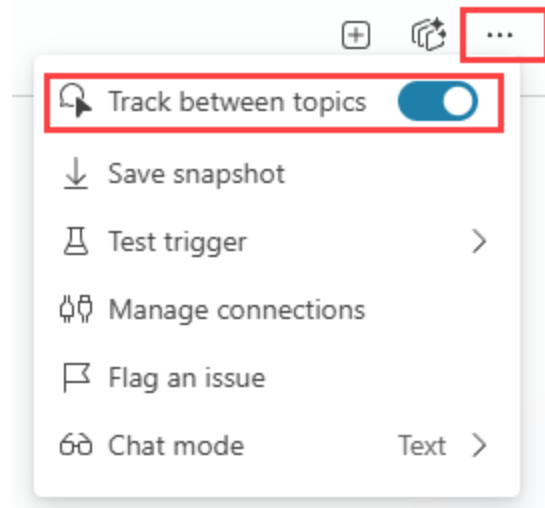

8. Select **Date and time** for **Identify**.
9. Select the variable in **Save user response as** and enter **VisitDateTime** for **Variable name**
10. Select the + icon under the left **Question** node and select **Send a message**.
11. In the **Enter a message** field, enter the following text:

Great! Let me get that scheduled for you.

12. Select **Save**.

Task 2.5 - Test the agent

1. If the **Test your agent** panel is not open, select the **Test** icon in the upper-right of the page to open the testing panel.
2. Select the **ellipses ...** menu at the top of the testing panel in the upper-right of the page.
3. If it's not enabled, enable **Track between topics**.

4. Select the **Start new test session** icon at the top of the testing panel.
5. When the **Conversation Start** message appears, your agent will start a conversation. In response, enter a trigger phrase for the topic that you've created:

I want to book a real estate showing

6. The agent responds with the "What is your name?" question, as shown in the following image.

▸ **Test your copilot**

Hello, I'm Real Estate Booking Service, a virtual assistant. Just so you are aware, I sometimes use AI to answer your questions. If you provided a website during creation, try asking me about it! Next try giving me some more knowledge by setting up generative AI.

Just now

Work with entities

Scenario

In this exercise, you will:

- Create and use entities

What you will learn

- How to create and use entities to improve the agent

High-level lab steps

- Create entities
- Use entities in nodes

Prerequisites

- Must have completed previous exercise: **Manage nodes**

Detailed steps

Exercise 1 - Create entities

Microsoft Copilot Studio uses entities to understand user intent. There are many prebuilt entities included for commonly used information. You can create custom entities for your specific purpose.

Task 1.1 - View prebuilt entities

1. Navigate to the Microsoft Copilot Studio portal <https://copilotstudio.microsoft.com> and ensure you are in the appropriate environment.
2. Select **Agents** from the left navigation pane.
3. Select the **Real Estate Booking Service** agent you created in the earlier lab.
4. Select **Settings** in the upper-right of the screen.
5. Select the **Entities** tab. You should see a list of the prebuilt entities for your agent.

12. Select **Save**.

13. Once the entity is saved, close the Property Type window.

Task 1.3 - Create number of bedrooms entity

1. Select **+ Add an entity** and select **+ New entity**.
2. Select the **Regular expression (Regex)** tile.
3. Enter **Number of Bedrooms** in the **Name** field.
4. Enter **[1-5]** in the **Pattern** field.
5. Select **Save**.
6. Once the entity is saved, close the Number of Bedrooms pane.
7. Select the **X** icon in the top-right to close out of Settings and return to your agent.

Exercise 2 - Use entities to improve the agent

Use entities in the conversational flow to improve the agent.

Task 2.1 - Use entities

1. Select the **Topics** tab.
2. Select the **Book Showing** topic.
3. Select the the **+** icon between the **Condition** and property **Question** nodes, then select **Ask a question**.
4. In the **Enter a message** field, enter the following text:

What type of property do you want to see?

5. Select **Property Type** for **Identify**.
6. Select **Select options for user** and check the **Display** option for all four values.
7. Select the variable in **Save user response as** and enter **PropertyType** for **Variable name**

The screenshot shows the configuration for a 'Question' node. The question text is 'What type of property do you want to...'. The 'Identify' section shows 'Property Type' selected. The 'Select options for user' section shows four options: 'Apartment', 'House', 'Condominium', and 'Duplex'. The 'Save user response as' section shows the variable 'PropertyType' and the choice type. A modal window titled 'User options for Property Type' is open, showing a search bar and a table of options with checkboxes for 'Display'.

List values (4)	Display
Apartment	☒
House	☒
Condominium	☒
Duplex	☒

8. Select the the + icon below the new **Question** node and select **Ask a question**.
9. In the **Enter a message** field, enter the following text:

How many bedrooms do you need?

10. Select **Number of Bedrooms** for **Identify**.
11. Select the variable in **Save user response as** and enter **NumberofBedrooms** for **Variable name**

12. Select **Save**.

Create agent flows

Scenario

In this exercise, you will:

- Create an agent flow

What you will learn

- How to create a tool for running an agent flow in Copilot Studio

High-level lab steps

- Create an agent flow to retrieve Dataverse data
- Create an agent flow to create Dataverse data

Prerequisites

- Must have completed **Previous exercise: Work with entities**

Detailed steps

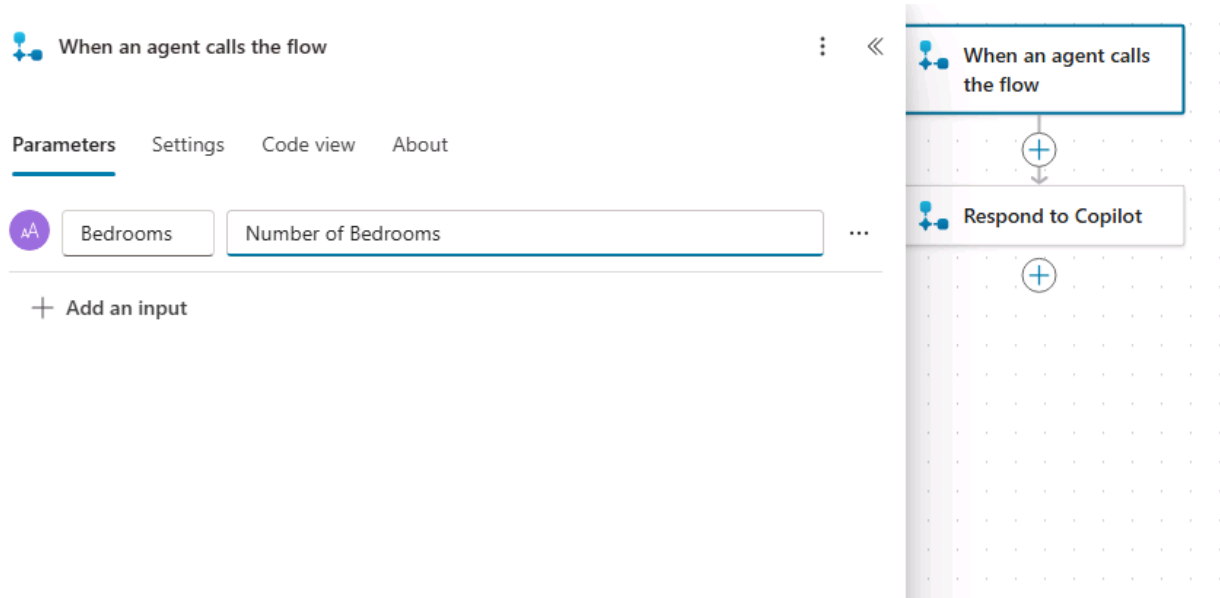

Exercise 1 - Create a tool to retrieve data from Dataverse

Microsoft Copilot Studio can access data in Microsoft Dataverse using agent flows.

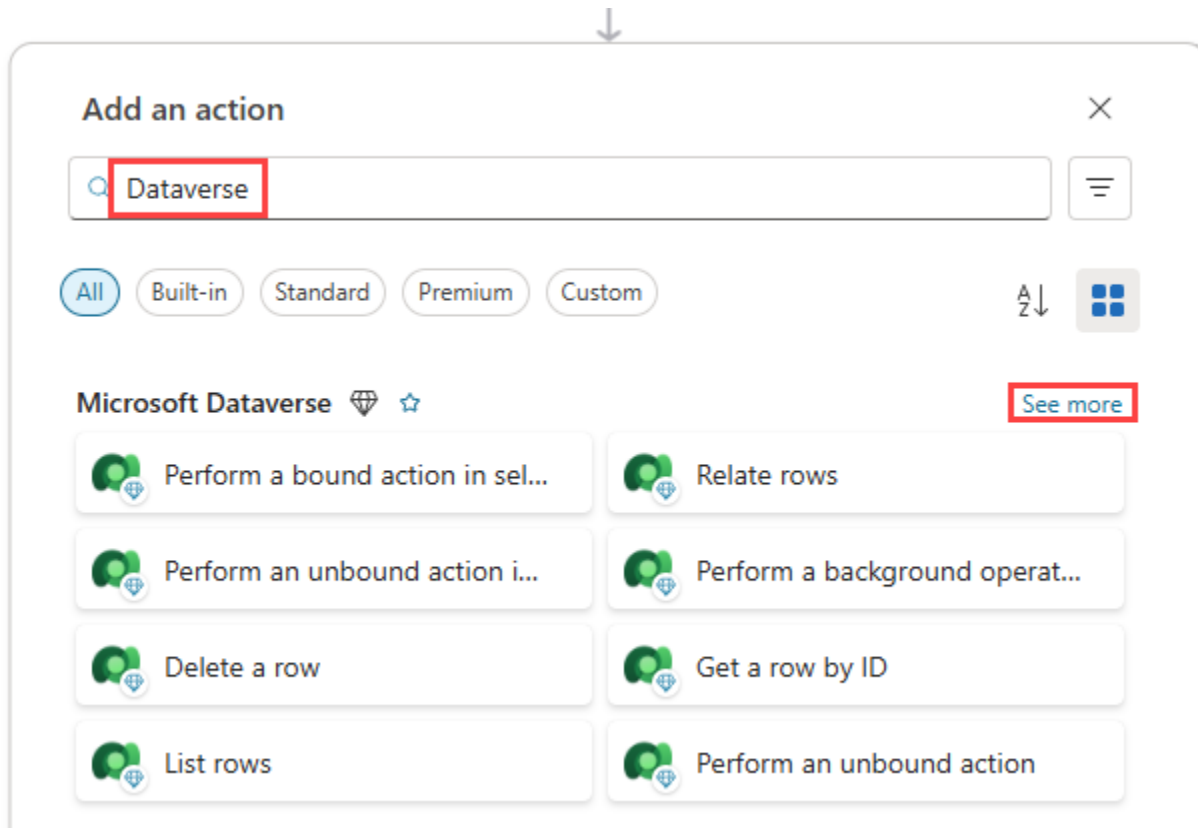

Task 1.1 - Create agent flow to retrieve a property

1. Navigate to the Microsoft Copilot Studio portal <https://copilotstudio.microsoft.com> and ensure you are in the appropriate environment.
2. Select **Agents** from the left navigation pane.
3. Select the **Real Estate Booking Service** you created in the earlier lab.
4. Select the **Tools** tab.
5. Select **+ Add a tool**.
6. Select **+ New tool**.

7. Select **Agent flow**.
8. Select the trigger step **When an agent calls the flow** and select **+ Add an input**.
9. Select **Text**.
10. Enter Bedrooms for **Input** and Number of Bedrooms for **Please enter your input**.

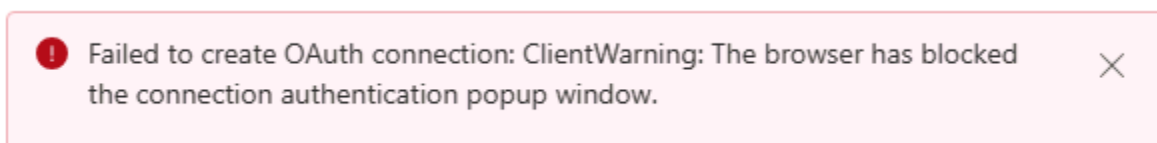

11. Select **Save draft** near the upper-right of the page.
12. Select the **+** icon between the two steps in the flow to add a new action.
13. Enter Dataverse in the **Search** field and select **See more** for the **Microsoft Dataverse** connector.

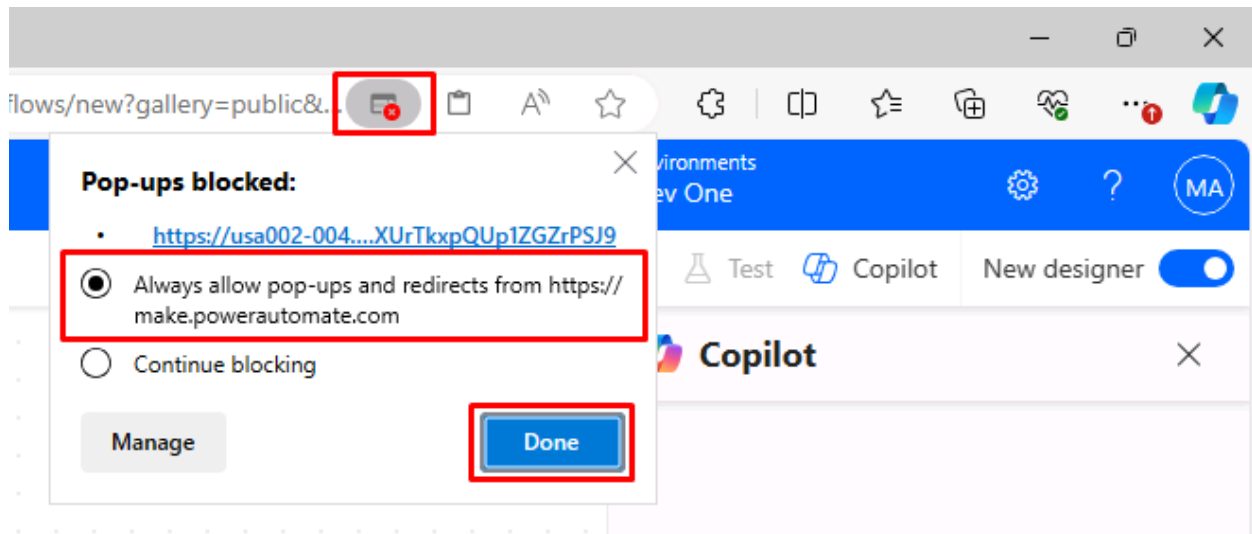

14. Select the **List rows** action.

15. If prompted for authentication, enter Lab connection for **Connection name**, select **OAuth** for **Authentication Type**, and select **Sign in**, and use your tenant credentials and **Allow access**.

Note: If you see a '**Failed to create OAuth connection**' error, you may need to allow popups in your browser.

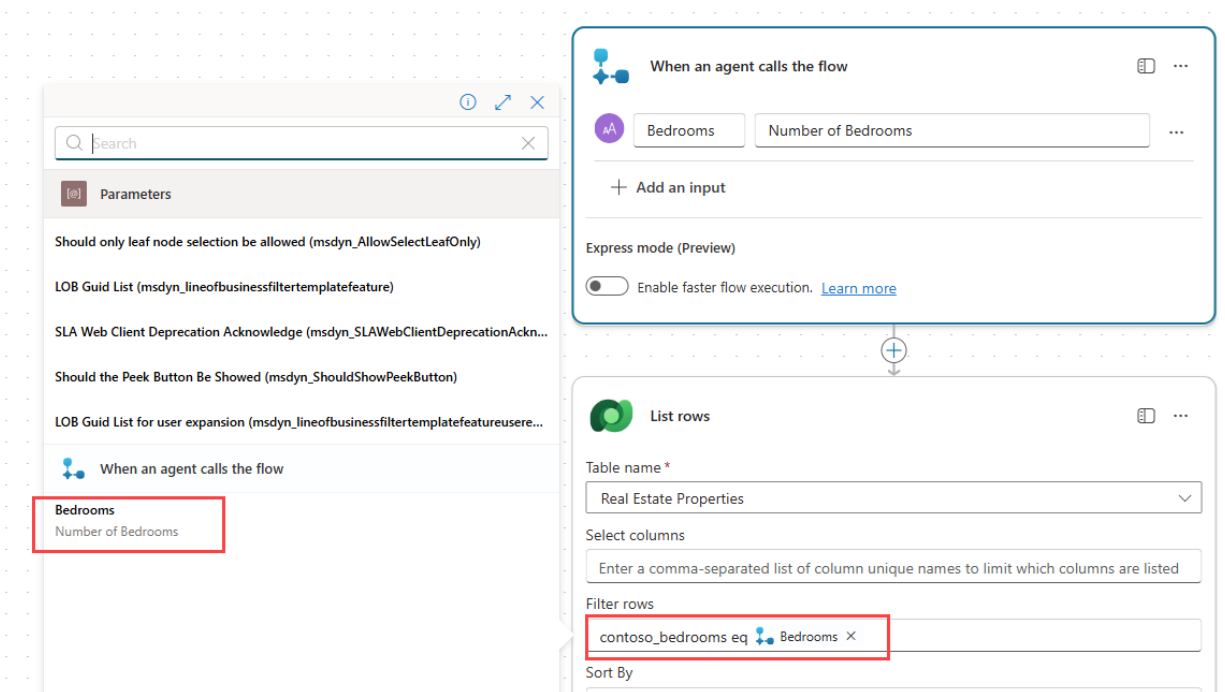

16. Select **Real Estate Properties** for table name.

17. Enter `contoso_bedrooms eq` (with a space after **eq**) in the **Filter Rows** field.

18. With the **Filter Rows** field still selected, select the **lightning** icon to its right, then select the **Bedrooms** parameter.

Important: Ensure there is a space between `eq` and **Bedrooms**.

19. Select **Save draft** near the upper-right of the page.

20. Select the **Respond to Copilot** action in the authoring canvas and select **+ Add an output**.

21. Select **Text**.

22. Enter PropertyId for **Enter a name**

23. Select the **Enter a value to respond with** field, and select **fx (Insert Expression)**.

24. Enter the following expression into the top field:

```
first(outputs('List_rows')['body/value'])['contoso_realestatepropertyid']
```

25. Select **Add**.

26. Select **+ Add an output**.

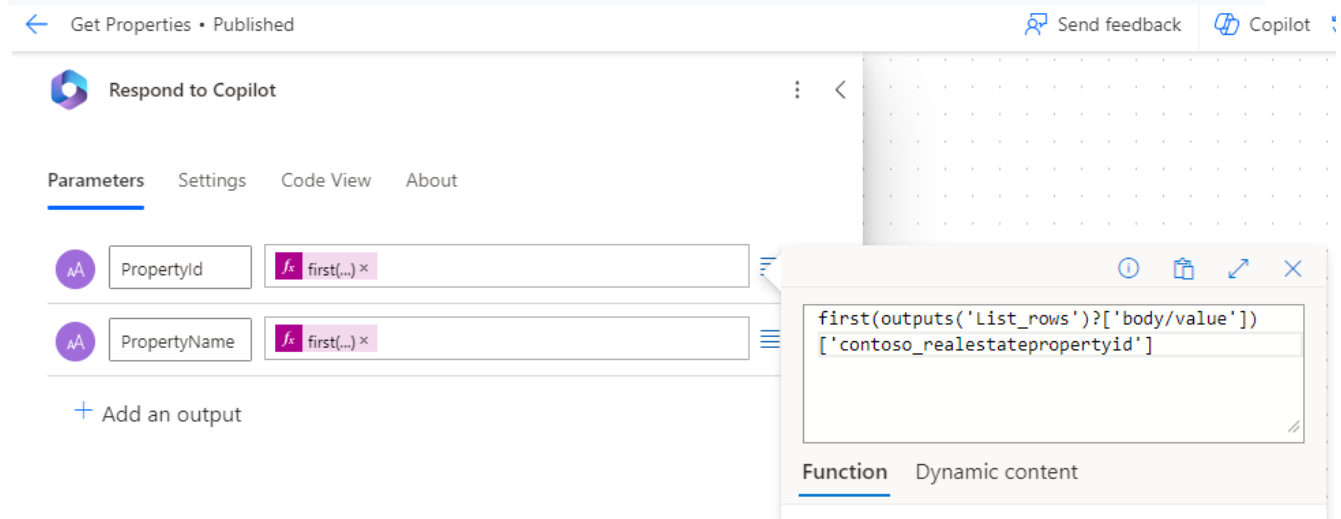

27. Select **Text**.

28. Enter PropertyName for **Enter a name**.

29. Select the **Enter a value to respond with** field, and select **fx (Insert Expression)**.

30. Enter the following expression:

```
first(outputs('List_rows')['body/value'])['contoso_propertyname']
```

31. Select **Add**.

32. Select the **Settings** tab in the **Respond to Copilot** pane.

33. Ensure that **Asynchronous Response** is set to **Off**.

▼ Networking

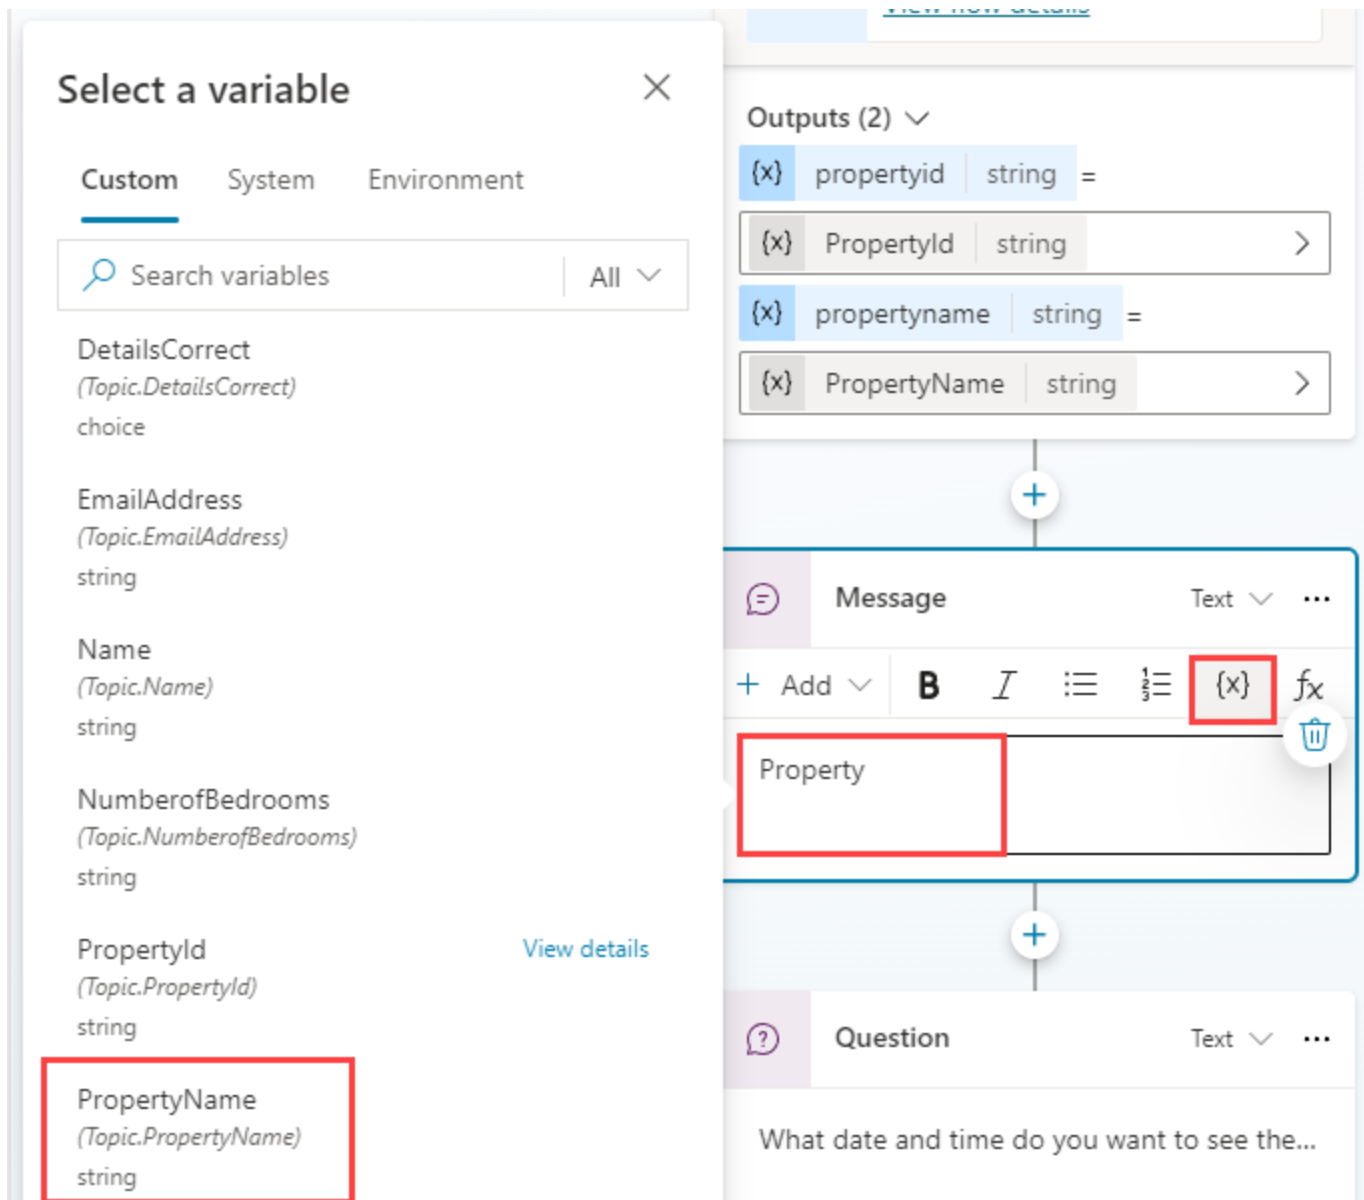

Asynchronous response

☐ Off

34. Select **Save draft** near the upper-right of the page.
35. Wait for the save to complete, then select **Publish**.
36. In the **Your agent flow published successfully!** pop-up, select **Go back to agent**.
37. Select the agent flow tool that you just created.
38. In the **Details** section, update the Flow **Name** to Get Property
39. Update the **Description** to Get properties with the right number of bedrooms.
40. Select **Save**
41. Select the **Tools** tab and see the Get Property flow you created.

Task 1.2 - Add the Get Property tool to the topic

1. Select the **Topics** tab.
2. Select the **Book Showing** topic.
3. Select the the + icon below the **How many bedrooms do you need question?** node, select **Add a tool**, select the **Tool** tab, and then select the **Get Property** agent flow.
4. Select the **ellipses (...)** in the **Which property do you want to see?** question node and select **Delete**.
5. Select the the + icon under the **Tool** node and select **Send a message**.
6. In the **Enter a message** field, enter Property (with a space following it).
7. In the same node, select the **{X} (Insert variable)** icon and select the **PropertyName** variable.

8. Select **Save**.

Exercise 2 - Create a tool to create data in Dataverse

Microsoft Copilot Studio can create data in Microsoft Dataverse using agent flows.

Task 2.1 - Create agent flow to make a booking

1. Select the **Tools** tab in **Real Estate Booking Service**.
2. Select **+ Add a tool**.
3. Select **+ New tool** and then **Agent flow**.

4. Select **Save draft** and wait for the agent flow to save.
5. Select the **Overview** tab
6. Select **Edit** in the **Details** section.
7. Rename the flow Create Booking Request
8. Select **Save**.
9. Select the **Designer** tab.
10. Select the trigger step **When an agent calls the flow** and select **+ Add an input**.
11. Select **Text**.
12. Enter PropertyId for **Input** and Property for **Please enter your input**.
13. Select **+ Add an input**.
14. Select **Text**.
15. Enter ViewerName for **Input** and Viewer Name for **Please enter your input**.
16. Select **+ Add an input**.
17. Select **Text**.
18. Enter ViewerEmail for **Input** and Viewer Email for **Please enter your input**.

	ViewerEmail	Viewer Email	...

+ Add an input

19. Select the **+** icon between the two steps in the flow to add a new action.
20. Enter Dataverse in the **Search** field and select **See more** for the **Microsoft Dataverse** connector.
21. Select the **Add a new row** action.
22. Select **Booking Requests** for table name.

23. Enter Agent booking in the **Booking Name** field.
24. Select **Show all** under **Advanced parameters**.
25. Enter contoso_bookingrequests() in the **Property (Real Estate Properties)** field, move the cursor within the parentheses, select the **lightning** icon, then select the **PropertyId** parameter.
26. Select the **Viewer Email** field, select the **lightning** icon, then select the **ViewerEmail** parameter.
27. Select the **Viewer Name** field, select the **lightning** icon, then select the **ViewerName** parameter.

Date and time that the record was migrated.

Status Reason

Reason for the status of the Booking Request

28. Select the **Respond to Copilot** action.
29. Select the **Settings** tab.
30. Ensure that **Asynchronous Response** is set to **Off**.
31. Select **Save draft** in the upper-right of the window.
32. Wait for the save to complete, then select **Publish**.

Task 2.2 - Validate your tools

1. Select **Agents** and open your **Real Estate Booking Service** agent.
2. Select the **Tools** tab and validate that both of your agent flows are in the list. If not, select **+Add a tool > Flow >** and select the missing agent flow. Select **Add and configure**.

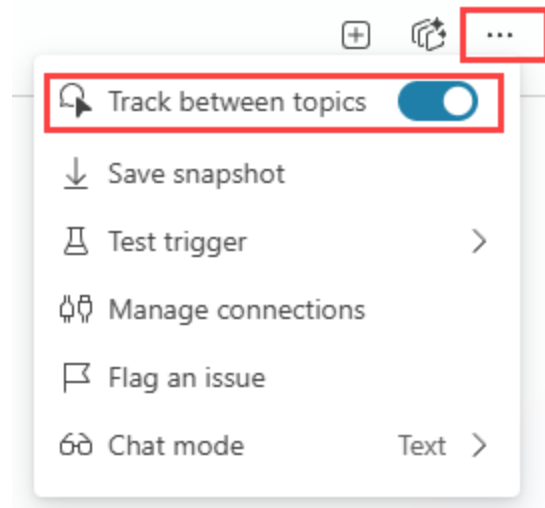

Task 2.3 - Add the Create Booking Request tool to the topic

1. Select the **Topics** tab.
2. Select the **Book Showing** topic.
3. Select the the **+** icon below the **Message** node at the bottom, select **Add a tool**, then select the **Create Booking Request** flow.
4. Select the **PropertyId** variable for the **PropertyId** input parameter.
5. Select the **Name** variable for the **ViewerName** input parameter.
6. Select the **EmailAddress** variable for the **ViewerEmail** input parameter.
7. Select the the **+** icon below the new **Action** node, select **Topic management**, select **Go to another topic** and select **End of Conversation**.
8. Select **Save**.

Exercise 3 - Test your agent

Task 3.1 - Make a booking request

1. If closed, select the **Test** icon in the upper-right of the page to open the testing panel.
2. Select the **ellipses ...** menu at the top of the testing panel in the upper-right of the page.

3. If it's not enabled, enable **Track between topics**.
4. Select the **Start new test session** icon at the top of the testing panel.
5. When the **Conversation Start** message appears, your agent will start a conversation. In response, enter a trigger phrase for the topic that you've created:

I want to book a real estate showing

6. Enter a name and email address.
7. After you supply the information, an Adaptive Card displays the information that you entered and asks if the details are correct. Select **Yes**.
8. Select **House** for the type of property prompt.
9. Enter 3 for the number of bedrooms prompts.

Are the details correct?

Just now

Yes

Just now

What type of property do you want to see?

Just now

House

Ask a question or describe what you need

0/2000

10. Enter Tomorrow 2:00 PM to the **What date and time do you want to see the property?** prompt.
11. Select **Yes** to the **Did that answer your question?** prompt.
12. Select any rating.
13. Enter **No** to the **Can I help with anything else?** prompt.

Task 3.2 - Verify the booking request

1. If it's not still open, navigate to <https://make.powerapps.com> in a new tab.
2. Make sure you are in the appropriate environment.
3. Select **Apps** in the left navigation.
4. Select **Play** on the **Real Estate Property Management** model-driven app.
5. In the left navigation, select **Booking Requests**. View the booking request your agent just created for you.

The screenshot shows the Power Apps interface for the 'Real Estate Property Management' app. The left navigation pane has a red box around 'Booking Requests'. The main area displays a table titled 'Active Booking Requests' with the following data:

☐	Booking Name ↑	Created On	Viewer Name	Viewer Email
☐	Copilot booking		John Doe	john@example.com
